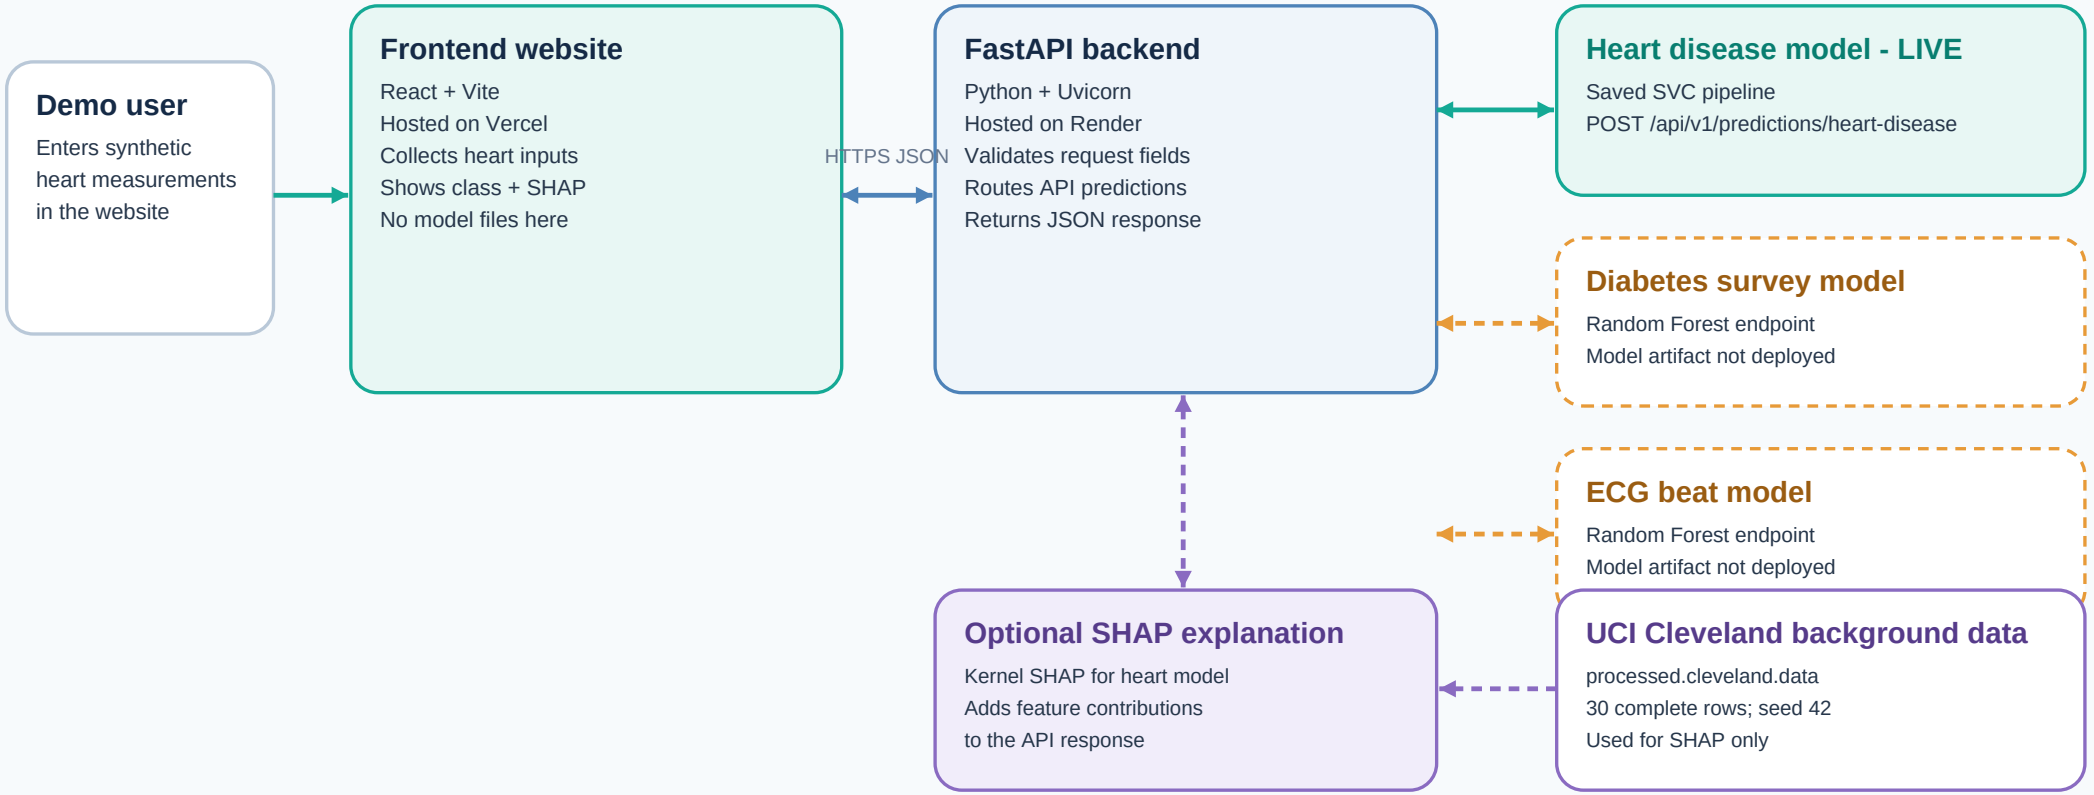
CardioTwin AI | System Architecture

Live web application with separate research prediction services

INDEPENDENT STUDENT TEAM



LIVE URLS

Frontend: https://digital-twin-six-sandy.vercel.app

Backend API: https://cardiotwin-api-vandana.onrender.com/api/v1 | Docs: /docs | Health: /health

BOUNDARIES AND LIMITATIONS

No database or stored patient records. Model outputs are separate; no patient-level fusion or combined risk score is produced.

ECG API expects engineered MLII/V1/RR features, not raw wearable recordings. Research prototype only; not for diagnosis or treatment.

Solid = live heart inference | Dashed = optional explanation or model artifact not deployed
